

ART CLAY NEW FORMULA PASTE 10 GM

NEW PASTE FORMULA

Use the paste to glue (wet or dry) clay parts together, to repair cracks and fill in marks and bumps, and to add a textured surface to the clay. It can also be painted onto a burnable core, like a leaf, twig or cork clay, to create a fine silver replica.

This new formula (water-based) paste combines the features of the original Art Clay paste and the Oil Paste, giving it more strength without the strong smell and more difficult handling of Oil Paste. This also means you can use it to join the following:

- Fired Art Clay pieces together
 - Dried (un-fired) Art Clay piece and fired Art Clay piece together
 - Casted Silver (or Silver findings) and fired Art Clay pieces together *Purity of higher than 925 sterling is recommended*
- The consistency of this paste is 90% silver and 10% binder and water as opposed to the previous paste which was 80% silver and 20% binder and water.
