

FUSING MOLD - TEXTURE FISH 32 X 32 X 2,8 CM

The purpose of this mould is to create a clean and sharp texture in your glass. Ideal for serial work of tiles etc. If you like the fish texture to appear on a slumped bowl, use this texture mould for your first firing cycles, at or close to a fusing temperature. Then slump the glass in a subsequent firing on a shallow slumper, e.g. Flat Slumper - Medium - 28x28x2.5cm - Fusing Mould 31041.

By cutting the glass smaller than the mould size, you can select specific areas of the mould for a series of slightly varying results. Instead of cutting the glass square try a circular piece instead. Pre-fuse a layer of a light transparent glass onto clear to obtain a colour shading as a result of the varying thickness produced by the texture.
