

BRACELET BENDING BAR KIT

This ImpressArt Bracelet Bending Tool is ideal for creating bracelets. To use this tool simply put the piece of metal in the groove and bend it backwards carefully. This will then create the same shape as the cuff. To make the piece of metal into a bracelet place the piece of metal into the notch and bend around the curved arch, this process then needs to be repeated on the other side to create the bracelet shape. This can be done with ease, it takes a matter of moments and does not require the use of a mallet. This can be used for bending metal strips up to a maximum of 1 1/2" wide (3.81cm).

Kit Includes:

- ImpressArt Bracelet Bending Bar
- 7 x Aluminum Bracelet Blanks, 16 x 150 mm, 2 mm thick
