

UNIVERSAL WORK HOLDER

This universal bench mount holder can be used for clamping small pieces like rings to perform work such as engravings, carving, filing, stone-setting and more. Position pegs in the holes and widen the holder using the adjustment screw: the piece will be locked and can be worked.

Its weighted base features a third-hand style ball mounting that can be adjusted to any position required by your workpiece. The pre-drilled holes allow you to mount the base securely to your bench or work surface (hardware is not included). Base has a 90 mm diameter. The jaws measures 50 mm and can be opened for a maximum of 70 mm.
