

UNIVERSAL DIVIDING ATTACHMENT UT 250

For accurate machining of circular work pieces. Used to manufacture sprockets, gears, ratchets, cams, etc.

Key Features:

- Worm drive for divisions through 360°.
- Feed adjustment by handwheel with graduated, zero-adjustable dial (1 revolution=10°)
- Unit may be fixed horizontally or vertically.
- Suitable for compound tables with distances between T-slots of 45 - 60mm.
- The flange of the dividing attachment is the same size as that of the main spindle of the PD 250/E lathe, thus 3 jaw chuck (NO 24034) and 4 jaw chuck (NO 24036) may be mounted.

Scope of delivery

- Faceplate Ø100mm
- Step clamp set of steel: Two each step blocks and clamps.
- With matching slot nuts, threaded rods and nuts.
- Packed in a wooden box.
