

MELTMASTER 70 - PROFESSIONAL ELECTRIC WAX MELTER 70 LITRES

The MeltMaster 70-liter wax melter is the ideal solution for melting a wide range of waxes, including beeswax, *soy wax*, paraffin, or microcrystalline wax. With double-walled construction, reliable electric heating, and an adjustable thermostat ranging from 30°C to 120°C, this device offers precise temperature control during the melting process. The **double boiler technique** is used to ensure indirect heating that protects different types of wax from damage caused by overheating, preserving their color, scent, and consistency. You can choose to use water or as the heating liquid, depending on your needs and the type of wax you are working with. The 70-liter capacity is ideal for many applications and makes the **MeltMaster 70** the perfect choice for laboratories and businesses working with different types of waxes. This compact version is equipped with all the necessary features for an efficient and safe melting process for any type of wax. Candle makers, wax sheets producers, and other wax-based product manufacturers will find the MeltMaster 70 extremely useful for quickly and efficiently melting a variety of waxes. Thanks to the thermostat with manual temperature adjustment, you can maintain the wax temperature in a stable and safe manner, avoiding dangerous overheating. **Key**

Features

- Solid stainless steel construction
- Adjustable thermostat for stable temperature maintenance
- Does not damage the wax
- Low power consumption
- Equipped with a raised support that makes the workstation more accessible
- Made in Italy

Technical Specifications

- Internal diameter: 350 mm
- Internal height: 650 mm
- External diameter: 470 mm
- External height: 750 mm + 350 mm (support)
- Capacity: 70 liters
- Diathermic oil capacity: 50 liters
- Power consumption: 2000 W
- Tap diameter: 1 inch
- Weight: 28 Kg
- Anti-heat protection: Polyethylene
