

## TORCH PASTE - WOOD BURNING PASTE 75 ML

Torch Paste is a unique product that allows you to "burn" wood, leather, cardboard, fabric, and more using the stencil technique. **Key features:**

- Dense product, ideal for stencil application
- Creates repetitive and intricate designs in a short time
- Perfect for use in combination with Cricut or Silhouette machines
- A 75 ml jar allows you to make approximately 25-30 objects with dimensions of 20 x 25 cm.
- Suitable for children aged 12 and above.

### How to use it:

- If you are using it on wood, sand the surface first using 220 grit sandpaper
- Apply your stencil and rub it well to ensure it adheres properly to the surface
- Apply a thin layer of Torch Paste, spread it evenly through all the stencil openings using a spatula
- Remove the excess and put it back into the jar
- Remove the stencil and let the paste absorb/dry for at least two minutes
- Use a high-powered heat gun (1000 W or higher) to evenly distribute heat over the design until it has a burned effect. More heat will result in a darker burn
- After the entire design has been burned, clean the surface to remove any debris
- Finish your project with a protective finish (if applicable) or leave it natural
