

GRANULATED PARAFFIN

Standard version paraffin 52/54.

Solidification at 55°C.

Particularly suitable for making candles by casting in molds made of plastic, latex, or silicone.

The product can be mixed up to 20% with stearin to reduce smokiness.

INSTRUCTIONS

USE:

- melt the paraffin in a bain-marie (70-90°C)
- add dyes and aromas if necessary and let it blend for 1-2 minutes.
- The liquid paraffin can be poured into a mold/container or used to make dipped candles.

IN COMBINATION WITH:

- Liquicer
- Powder pigments
- Wax Pigment Sticks
- Wax pigment pastilles
- Any wick except round for gel wax
