

PALM WAX FOR MOLDS

Natural palm wax, granular. Allows to achieve very particular effects, fascinating crystallizations, and a very smooth touch. 100% natural, does not require any additional additives besides colorants and fragrances. Specific version for casting in molds made of plastic, latex, or silicone, with slight shrinkage that facilitates removal.

INSTRUCTIONS

- USE:
- The wax melts between 60 and 66°C.
 - If you wish to add pigments, bring the temperature to about 85/90°C (no higher), to ensure they dissolve correctly.
 - The addition of fragrances should be done before pouring into the molds but at a temperature not lower than 60°C.
 - After removing from the mold, the candles should be left to rest for about 48 hours before lighting.

- IN COMBINATION WITH:
- Liquicer
 - Powder pigments
 - Wax pigment pastilles
 - Any wick except Round Wick For Gel Wax and Round Wick
