

KATO POLYCLAY LIQUID

Kato Liquid Polyclay is a unique product that adds a variety of new and exciting possibilities to the world of polymer clay.

Key features

- Once cured, the product has great resistance and flexibility, but it can also be cut with scissors.
- Kato Liquid is available in transparent versions: red, yellow, blue, orange, purple and green, transparent, while the black and white colors are opaque.
- The Transparent Kato Liquid version can be used to give a transparent finish to your polymer clay projects, to create three-dimensional effects or as an adhesive before firing, applying the product between two parts in polymer clay that you want to adhere.
- Kato Polyclay Liquid can be used as a softener for clay: mixed in small quantities it can soften it to make it more workable.
- All these colors can be mixed together to obtain other shades.
- Transparent colors can be turned to opaque by simply adding the color white.
- It is possible to add mica powders to add metallic and pearlescent effects.
- Can be poured into metal or glass molds before curing.
- Kato Liquid Polyclay cures in the kitchen oven at 130 ° C for about 30 min or 150° for 10 minutes.
