

SCAGLIOLA PLASTER

Hand-applied gypsum-based plaster and smoothing.

Employment

The scagliola is used as a smoothing layer or as a base plaster, applied in several successive coats.

How to use

- Mix the scagliola by pouring it little by little into the water contained in the gabasso until completely absorbed, leaving it to imbibe and mixing only the part that is immediately used.
- a) Used as plaster, SCAGLIOLA is spread on the wall or ceiling to the desired thickness and equal to at least 5 mm, in several coats, using the wooden plug; after about half an hour, the imperfections must be removed surfaces with the American trowel and then top up the surface with product.
- b) Used as a smoothing product, SCAGLIOLA should be spread to a thickness of at least 3 mm, remembering that with low thicknesses workability is significantly reduced, especially if the underlying surface is dry
