

## DIFFUSOL M - DILUTING SOLUTION FOR FRAGRANCES

Diffusol M is an unscented base oil designed to dilute concentrated candle fragrances for diffusers, allowing you to adjust the desired intensity. As it does not contain alcohol, it can be handled without special authorizations. When used with reed sticks, a mixture of 90 parts Diffusol M and 10 parts distilled water creates the most effective and economical diluent. This blend can be combined with 10% to 20% fragrance, adjustable according to your preferences and the maximum usage level specified by the fragrance's IFRA sheet for reed diffusers. Please note that you will be producing a potentially hazardous mixture that will be subject to CLP labeling and the mandatory UFI code if sold to third parties.

Key Features:

- Unscented base oil for diluting concentrated candle fragrances.
- Effective and economical mixture with reed sticks.
- Adjustable based on preferences and IFRA guidelines.
- Does not contain alcohol, so no special authorizations are required.
- Subject to CLP labeling and mandatory UFI code for third-party sales.

Substances:

- 1-Butanol, 3-methoxy-3-methyl-
