

SIO-2 - LUNA STONEWARE CLAY SPECKLED 0-0.2 MM CHAMOTTE

Explore SIO-2 Luna – the speckled stoneware clay that adds unique charm to artistic ceramics!

With impalpable grog (0-0.2 mm) and natural melting minerals, this clay reveals a beautiful ivory-white matrix with expressive dark specks. Perfect for ceramic art, it performs excellently in drying and firing, and pairs wonderfully with transparent glazes.

Main Features

- Fine grog 0-0.2 mm
- Minerals create natural speckled effect
- Plasticity IP 14
- Porosity at 1260°C: 0%
- Shrinkage at 1260°C: 5.3%

Benefits for you

- Distinctive speckled surface
- Enhanced brilliance with transparent glazes
- Ideal for single firing or biscuit at 1050–1080°C
- Great for sculpture, wall art and decorative pieces

Get your hands on SIO-2 Luna and express your art with natural elegance!

Important advice: The dark specks are created by natural minerals that may include rehydratable elements after low-temperature firing, causing flaking. To avoid this, fire the biscuit at 1050–1080°C with extended soak time. This issue does not occur in single firing.
