

EMBEDDABLES EYELET FOR SILVER CLAY

Made with an exclusive high-silver-content alloy, this silver Embeddables® eyelet is designed to complete unfired silver metal clay pendants or charms. The peg can be easily inserted into the raw clay, ensuring a secure hold during firing. After firing, the clay fully sinters with the surface, allowing the finding to be legally marked as “Sterling.” Also suitable for glass fusing and polymer clay applications. **Key features**

- Exclusive high silver content alloy
- Peg insert for unfired material
- Ideal for pendants and charms in silver metal clay
- Full sintering after firing
- Can be legally marked as “Sterling”
- Compatible with glass fusing and polymer clay

Technical specifications

- Material: high silver content alloy
- Type: embeddable eyelet with peg
- Compatibility: Silver Metal Clay, glass fusing, polymer clay
- Application stage: before firing
- Mounting method: direct insertion into unfired material
- Listed dimensions: inner ring diameter + length x width
- Heat resistance: suitable for firing with silver metal clay
