

ALCOHOL POWDER ANILINES

Alcohol-soluble powder anilines dissolve in alcohol and, thanks to their fast-drying capability, are ideal for coloring even very thin woods.

INSTRUCTIONS

- Dissolve in colorless alcohol or denatured ethyl alcohol at concentrations of 0.5% to 2% (1% = 10 grams of aniline per 1 liter of alcohol).
- The color can be applied by brush, spray, immersion, or pad.
- It's important to achieve an even color, as the fast drying of the dye may cause unwanted streaks.
